PROFILE

Python developer with 5+ years shipping production software in banking, the public sector and telecom. Specialized in **modernizing legacy systems** (C#/ASP.NET and C to Python/Django) through reverse engineering, architecture redesign and incremental, per-module tested delivery, without stopping operations. I bring **AI into real processes**: credit scoring, document data extraction, RAG over legal regulations and agent-based automation. Experienced with sensitive data (KYC, credit bureaus, financial disclosures) and remote, multicultural teams.

HIGHLIGHTS

- Led the migration of a legacy C#/ASP.NET system to Python/Django at the Anti-Corruption Office of Jujuy: reverse engineering, new architecture and module-by-module tested delivery while keeping the service live.
- Migrated a C backend to Django + Redis at Lambda Solutions, with a full architecture redesign and Google Cloud deployment.
- Cut asset-disclosure report generation time by 40% with custom algorithms.
- Shipped a production RAG system (LangChain, pgvector, Voyage AI) for legal/regulatory queries.
- Built an end-to-end banking credit scoring system with a state machine, integrating Nosis and SIDEBA, with unit, integration and E2E test coverage.

EXPERIENCE

Dinardi Projects — 2025 – present

Backend developer · banking software

- AI process automation for commercial banks: PDF parsers extracting corporate structure, debt and management bodies, tested on real cases.
- Credit scoring system with a state machine, integrating external bureaus (Nosis WS01) and financial APIs (SIDEBA).
- Automated credit report generation (PDF via WeasyPrint) with financial ratios and projected cash flow.
- Roles and permissions architecture (6 roles) and complex approval workflows.
- Daily use of Claude Code and agents for generation, review and refactoring without losing test coverage.

Python 3.12 · Django 5.2 · HTMX · PostgreSQL · pytest · Playwright

Anti-Corruption Office · Jujuy Province — 2021 – 2025

Tech lead · systems modernization

- Led the modernization of the legacy C#/ASP.NET system to Python/Django: reverse engineering, architecture redesign and incremental delivery with per-module tests.
- Designed and built the financial disclosure statements system: sensitive data, role-based access control and thorough validation.
- Production RAG with LangChain over a custom document base indexed with pgvector and Voyage AI embeddings.
- Automated legal document analysis with LLMs, cutting the team's repetitive manual work.

Python · Django · PostgreSQL · LangChain · pgvector

Lambda Solutions — 2022 – 2025

Backend developer · fiber-optic networks

- Led the migration of a C backend to Django + Redis: legacy code analysis, reverse engineering and full architecture redesign.
- Python scripts for correction, transformation and maintenance of production databases.
- Deployments on Google App Engine and Linux VMs with repeatable delivery flows.
- Fiber-optic network management app for telecom clients; MCP servers exposing internal tools to AI assistants.

Python · Go · Django · PostgreSQL · Redis · MCP

Independent consulting **2024 – present**

AI consultant

- RAG systems, agents and automations for companies; AI training for teams, teachers and public institutions (CIDEJ Foundation, with UNJu).
- Founder of TalentBase, an AI talent-matchmaking SaaS in production with real clients (Django, pgvector, LangChain).

STACK

Backend	Python, Django, FastAPI, Go, HTMX, Celery, REST
Data	PostgreSQL, pgvector, Redis, SQL Server (legacy)
AI	LangChain, RAG, embeddings, MCP, agents, Claude Code
Quality & delivery	pytest, Playwright, CI/CD, Docker, AWS, GCP
Legacy	C#/ASP.NET, C, reverse engineering, incremental migrations

EDUCATION

BSc in Information Technology
Universidad de Palermo

Analyst Programmer
Universidad Nacional de Jujuy

LANGUAGES

Spanish native · English intermediate (B1) · Portuguese intermediate

COMMUNITY & ECOSYSTEM

- Founder of jujuy.dev, the developer community of Jujuy.
- Creator of Cole Juy, a live bus tracker for San Salvador de Jujuy (colejuy.vercel.app).
- Hackathon organizer and ambassador for Monad, Solana and Stellar in northern Argentina; host of the Jujuy Builder Session (Celo × Ripio). Winner of the Acutis Summit hackathon (Mission Match).
- IT Project Director at the CIDEJ Foundation.
